Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/836,548	Applicant(s) DREWE et al.
	Examiner Brenda Coleman	Art Unit 1624

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on Jul 23, 2003
 - 2a) This action is FINAL. 2b) This action is non-final.
 - 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.
- Disposition of Claims**
- 4) Claim(s) 1-14, 22-40, 47-93, and 97 is/are pending in the application.
 - 4a) Of the above, claim(s) _____ is/are withdrawn from consideration.
 - 5) Claim(s) _____ is/are allowed.
 - 6) Claim(s) 1-14, 22-40, 47-93, and 97 is/are rejected.
 - 7) Claim(s) _____ is/are objected to.
 - 8) Claims _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) The proposed drawing correction filed on _____ is: a) approved b) disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some* c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

*See the attached detailed Office action for a list of the certified copies not received.

- 14) Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).
a) The translation of the foreign language provisional application has been received.
- 15) Acknowledgement is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) Notice of References Cited (PTO-892)

- 6) Other:

Art Unit: 1624

DETAILED ACTION

Claims 1-14, 22-40, 47-93 and 97 are pending in the application.

This action is in response to applicants' amendment filed July 23, 2003. Claims 94-96 have been canceled and claims 1, 47-49, 51, 57, 61, 62, 64, 66, 70, 71, 73, 76, 80, 81 and 83 have been amended.

Response to Amendment

Applicant's amendments filed July 23, 2003 have been fully considered with the following effect:

1. With regards to the rejection as being drawn to an improper Markush group maintained in the last office action, the applicant's arguments have been fully considered but are not found persuasive. The applicant's stated that the "independent claims 1, 51, 57, 66 and 76 as amended refer only to compounds wherein A² is a monocyclic ring selected from heteroarylene or unsaturated, partially unsaturated, or saturated heterocycloalkylene containing a total of 7 ring atoms", however, dependent claim 49 has not been amended with respect to A².

Claim 49 is rejected as being drawn to an improper Markush grouping. For reasons of record and stated above.

2. With regards to the 35 U.S.C. § 112, first paragraph rejection of claims 1-14, 22-40 and 47-97 maintained in the last office action, applicants' stated that "the structures of prodrug" for

Art Unit: 1624

the compounds of the invention are defined in the specification at page 33, lines 1-22". However, the compounds of formula (I) may possess more than one carboxyl group or hydroxy group.

It is the Wands factors which are used to evaluate the enablement question. *In re Wands*, 8 USPQ2d 1400 (Fed. Cir. 1988); *Ex parte Forman*, 230 USPQ 546. The factors include: 1) The nature of the invention, 2) the state of the prior art, 3) the predictability or lack thereof in the art, 4) the amount of direction or guidance present, 5) the presence or absence of working examples, 6) the breadth of the claims, and 7) the quantity of experimentation needed.

The nature of the invention in the instant case, has claims which embrace substituted thiazepine compounds. The instant compounds of formula (I) wherein the prodrugs are not described in the disclosure in such a way the one of ordinary skill in the art would no how to prepare the various compounds suggested by claims 1-14, 22-40 and 47-97. There are no starting materials and/or methods of preparing the prodrugs of the compounds of formula (I). In view of the lack of direction provided in the specification regarding starting materials, the lack of working examples, and the general unpredictability of chemical reactions, it would take an undue amount of experimentation for one skilled in the art to make the claimed compounds and therefore practice the invention.

Claims 1-14, 22-40, 47-93 and 97 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. For reasons of record and stated above.

Art Unit: 1624

3. With regards to the 35 U.S.C. § 112, first paragraph rejection of claims 54-88 and 95-97 maintained in the last office action, the applicants' arguments have been fully considered, however they were not found persuasive.

Applicants argue that they are not required to show efficacy against all cancers. Firstly, according to Stedman there over two hundred such cancerous conditions, including, "acinar cell tumors, a solid and cystic tumors of the pancreas, occurring in young women; tumors cells contain zymogen granules. Acoustic tumors vestibular schwannoma. Acute splenic tumors, acute splenitis, enlargement, and softening of the spleen, usually due to bacteremia or severe bacterial toxemia. Adenoid tumors adenoma, or neoplasm with gland like spaces. Adenomatoid tumors a small benign tumors of the male epididymis and female genital tract, consisting of fibrous tissue or smooth muscle enclosing anastomosing gland-like spaces containing acid mucopolysaccharide lined by flattened cells that have ultra-structural characteristics of mesothelial cells, benign mesothelioma of genital tract tumors, adenomatoid odontogenic tumors a benign epithelial odontogenic tumors appearing radiographically as a well-circumscribed radiolucent-radiopaque lesion usually surrounding the crown of an impacted tooth in an adolescent or young adult; characterized histologically by columnar cells organized in a duct like configuration interspersed with spindle-shaped cells and amyloid like deposition that gradually undergoes dystrophic calcification, adenoameloblastoma, ameloblastic adenomatoid tumors. Adipose tumors lipoma. Ameloblastic adenomatoid tumors. Adenomatoid odontogenic tumors. Amyloid tumors nodular

Art Unit: 1624

amyloidosis. Aortic body tumors chemodectoma. Bednar tumors. Pigmented dermatofibrosarcoma protuberans. Benign tumors, a tumors that does not form metastases and does not invade and destroy adjacent normal tissue. Innocent tumors. Blood tumors, term sometimes used to denote an aneurysm, hemorrhagic cyst, or hematoma. Borderline ovarian tumors an ovarian surface epithelial tumors in which the growth pattern is intermediate between benign and malignant; includes mucinous, serous, endometrioid, and Brenner tumors of the ovary; highly curable but may recur after surgical removal. Low malignant potential tumors. Brenner tumors a relatively infrequent benign neoplasm of the ovary, consisting chiefly of fibrous tissue that contains nests of cells resembling transitional type epithelium, as well as gland like structures that contain mucin; origin is controversial, but it may arise from the Walthard cell rest; ordinarily found incidentally in ovaries removed for other reasons, especially in postmenopausal women.

Brooke tumors. Trichoepithelioma. Brown tumors, a mass of fibrous tissue containing hemosiderin-pigmented macrophages and multinucleated giant cells, replacing and expanding part of a bone in primary hyperparathyroidism. Tumors burden the total mass of tumors tissue carried by a patient with a malignancy. Calcifying epithelial odontogenic tumors a benign epithelial odontogenic neoplasm derived from the stratum intermedium of the enamel organ; a painless, slowly growing, mixed radiolucent-radiopaque lesion characterized histologically by cords of polyhedral epithelial cells, deposits of amyloid, and spherical calcifications. Pindborg tumors. Carcinoid tumors a usually small, slow-growing neoplasm composed of islands of rounded, oxyphilic, or spindle-shaped cells of medium size, with moderately small vesicular nuclei, and

Art Unit: 1624

covered by intact mucosa with a yellow cut surface; neoplastic cells are frequently palisaded at the periphery of the small groups, and the latter have a tendency to infiltrate surrounding tissue. Such neoplasms occur anywhere in the gastrointestinal tract (and in the lungs and other sites), with approximately 90% in the appendix and the remainder chiefly in the ileum, but also in the stomach, other parts of the small intestine, the colon, and the rectum; those of the appendix and small tumors seldom metastasize, but reported incidences of metastases from other primary sites and from tumors exceeding 2.0 cm in diameter vary from 25-75%; lymph nodes in the abdomen and the liver may be conspicuously involved, but metastases above the diaphragm are rare.

Carcinoid syndrome. Carotid body tumors. Chemodectoma. Cellular tumors a tumors composed mainly of closely packed cells. Cerebellopontine angle tumors vestibular schwannoma.

Chromaffin tumors. Chromaffinoma. Codman tumors. Chondroblastoma of the proximal humerus. Collision tumors two originally separate tumors, especially a carcinoma and a sarcoma, that appear to have developed by chance in close proximity, so that an area of mingling exists.

Carcinosarcoma. Connective tumors, any tumors of the connective tissue group, such as osteoma, fibroma, sarcoma. Dermal duct tumors a benign small tumors derived from the intradermal part of eccrine sweat gland ducts occurring often on the head and neck. Dermoid tumors. Dermoid cystumors. Desmoid tumors. Desmoid (2). Desmoplastic small cell tumors a high-grade malignant tumors found most often in the abdomen of adolescent males; typically tumors cells contain both desmin and keratin, i.e., show hybrid features like fetal mesothelial cells; the exact nature of these cells remains unknown. Dysembryoplastic neuroepithelial tumors a rare

Art Unit: 1624

low-grade neoplasm most frequently seen in children and associated with seizures and cortical dysplasia; the often multinodular, multicystic tumors is composed of oligodendroglial-like cells with accompanying neurons. Eighth nerve tumors. Vestibular schwannoma. Embryonal tumors. Embryonic tumors a neoplasm, usually malignant, which arises during intrauterine or early postnatal development from an organ rudiment or immature tissue; it forms immature structures characteristic of the part from which it arises, and may form other tissues as well. The term includes neuroblastoma and Wilms tumors, and is also used to include certain neoplasms presenting in later life, this usage being based on the belief that such tumors arise from embryonic rests. Teratoma, embryoma, embryonal tumors of ciliary body embryonal medulloepithelioma. Endocervical sinus tumors malignant germ cell tumors commonly found in the ovary. The tumors arises from primitive germ cells and develops into extra-embryonic tissue resembling the yolk sac, yolk sac carcinoma. Endodermal sinus tumors a malignant neoplasm occurring in the gonads, in sacrococcygeal teratomas, and in the mediastinum; produces (alpha)-fetoprotein and is thought to be derived from primitive endodermal cells. Yolk sac tumors. Endometrioid tumors a tumors of the ovary containing epithelial or stromal elements resembling tumors of the endometrium. Erdheim tumors craniopharyngioma. Ewing tumors a malignant neoplasm which occurs usually before the age of 20 years, about twice as frequently in males, and in about 75% of patients involves bones of the extremities, including the shoulder girdle, with a predilection for the metaphysis; histologically, there are conspicuous foci of necrosis in association with irregular masses of small, regular, rounded, or ovoid cells (2-3 times the diameter of erythrocytes), with

Art Unit: 1624

very scanty cytoplasm. Endothelial myeloma. Ewing sarcoma. Fecal tumors. Fecaloma. Fibroid tumors old term for certain fibromas and leiomyomas. Gastrointestinal autonomic nerve tumors benign or malignant tumors of stomach and small intestine histogenetically related to myenteric plexus; may be familial and related to gastrointestinal neuronal dysplasia. Gastrointestinal stromal tumors benign or malignant tumors composed of unclassifiable spindle cells; immunohistochemically distinct from smooth muscle and Schwann cell tumors. Giant cell tumors of bone a soft, reddish-brown, sometimes malignant, osteolytic tumors composed of multinucleated giant cells and ovoid or spindle-shaped cells, occurring most frequently in an end of a long tubular bone of young adults. Giant cell myeloma. Osteoclastoma, giant cell tumors of tendon sheath a nodule, possibly inflammatory in nature, arising commonly from the flexor sheath of the fingers and thumb; composed of fibrous tissue, lipid- and hemosiderin-containing macrophages, and multinucleated giant cells. Localized nodular tenosynovitis. Glomus tumors, a vascular neoplasm composed of specialized pericytes (sometimes termed glomus cells), usually in single encapsulated nodular masses that may be several millimeters in diameter and occur almost exclusively in the skin, often subungually in the upper extremity; it is exquisitely tender and may be so painful that patients voluntarily immobilize an extremity, sometimes leading to atrophy of muscles; multiple glomus tumors occur, sometimes with autosomal dominant inheritance. Tumors 1 with cavernous spaces lined by glomus cells are called glomangiomas. Glomus jugulare tumors a glomus tumors arising from the jugular glomus and usually presenting initially in the hypotympanum. Glomus tympanicum tumors a glomus tumors arising on the medial wall of the

Art Unit: 1624

middle ear. Godwin tumors benign lymphoepithelial lesion. Granular cell tumors a microscopically specific, generally benign tumors, often involving peripheral nerves in skin, mucosa, or connective tissue, derived from Schwann cells; the abundant cytoplasm contains lysosomal granules, the cells infiltrate between adjacent tissues although growth is slow, and adjacent surface epithelium may show hyperplasia. Granulosa cell tumors a benign or malignant tumors of the ovary arising from the membrana granulosa of the vesicular ovarian (graafian) follicle and frequently secreting estrogen; it is soft, solid, white or yellow, and consists of small round cells sometimes enclosing Call-Exner bodies; larger lipid-containing cells may be present tumors folliculoma (1). Grawitz tumors old eponym for renal adenocarcinoma. heterologous tumors a tumors composed of a tissue unlike that from which it springs. Hilar cell tumors of ovary, steroid cell tumors. Histoid tumors old term for a tumors composed of a single type of differentiated tissue. Homologous tumors a tumors composed of tissue of the same sort as that from which it springs. Innocent tumors, benign tumors, interstitial cell tumors of testis, Leydig cell tumors. Islet cell tumors an endocrine tumors composed of cells equivalent or related to those in the normal islet of Langerhans; may be benign or malignant; usually hormonally active; comprises insulinomas, glucagonomas, vipomas, somatostatinomas, gastrinomas, pancreatic polypeptide-secreting tumors, and multihormonal or hormonally inactive pancreatic islet cell tumors. Juxtaglomerular cell tumors a tumors of juxtaglomerular cell origin usually presenting with symptoms of secondary aldosteronism, including severe diastolic hypertension, which appears to be due to tumors-produced renin. The histologic appearance resembles that of a

Art Unit: 1624

hemangiopericytoma. Klatskin tumors, adenocarcinoma located at the bifurcation of the common hepatic ductumors Krukenberg tumors a metastatic carcinoma of the ovary, usually bilateral and secondary to a mucous carcinoma of the stomach, which contains signet-ring cells filled with mucus. Landschutz tumors a transplantable, possibly isoantigenic, highly virulent neoplasm which can be grown in any strain of mice; the host is killed in a few days by what is apparently an anaplastic carcinoma. Leydig cell tumors a testicular and, less commonly, ovarian neoplasm composed of Leydig cells, usually benign but may be malignant; may secrete androgens or estrogens. Interstitial cell tumors of testis. Lindau tumors, hemangioblastoma, low malignant potential tumors, borderline ovarian tumors, malignant tumors, a tumors that invades surrounding tissues, is usually capable of producing metastases, may recur after attempted removal, and is likely to cause death of the host unless adequately treated. Malignant mixed müllerian tumors (MMMT), mixed mesodermal tumors, melanotic neuroectodermal tumors of infancy a benign neoplasm of neuroectodermal origin that most often involves the anterior maxilla of infants in the first year of life. It presents clinically as a rapidly growing blue-black lesion producing a destructive radiolucency; histologically, it is characterized by small, round, undifferentiated tumors cells interspersed with larger polyhedral melanin-producing cells arranged in an alveolar configuration. Melanoameloblastoma, pigmented ameloblastoma, pigmented epulis, progonoma of jaw, retinal anlage tumors. Merkel cell tumors a rare malignant cutaneous tumors seen in sun-exposed skin of elderly patients composed of dermal nodules of small round cells with scanty cytoplasm in a trabecular pattern; the tumors cells contain cytoplasmic dense core granules

Art Unit: 1624

resembling neurosecretory granules seen in Merkel cells. Primary neuroendocrine carcinoma of the skin, trabecular carcinoma. Mesonephroid tumors, mesonephroma. Mixed tumors a tumors composed of two or more varieties of tissue. Mixed mesodermal tumors a sarcoma of the body of the uterus arising in older women, composed of more than one mesenchymal tissue, especially including striated muscle cells. Malignant mixed müllerian tumors. mixed tumors of salivary gland a tumors composed of salivary gland epithelium and fibrous tissue with mucoid or cartilaginous areas. Pleomorphic adenoma, mixed tumors of skin, chondroid syringoma, mucoepidermoid tumors, mucoepidermoid carcinoma. Nelson tumors a pituitary tumors causing the symptoms of Nelson syndrome, oil tumors, lipogranuloma, oncocytic hepatocellular tumors, fibrolamellar liver cell carcinoma, organoid tumors a tumors of complex structure, glandular in origin, containing epithelium, connective tissue, etc. Pancoast tumors any carcinoma of the lung apex causing the Pancoast syndrome by invasion or compression of the brachial plexus and stellate ganglion. Superior pulmonary sulcus tumors, papillary tumors, papilloma, paraffin tumors, paraffinoma. phantom tumors accumulation of fluid in the interlobar spaces of the lung, secondary to congestive heart failure, radiologically simulating a neoplasm. Phyllodes tumors a spectrum of neoplasms consisting of a mixture of benign epithelium and stroma with variable cellularity and cytologic abnormalities, ranging from benign phyllodes tumors to cytosarcoma phyllodes; most often involves the breast tumors pilar tumors of scalp a solitary tumors of the scalp in elderly women that may ulcerate; microscopically resembles squamous cell carcinoma composed of glycogen-rich clear cells, but is benign. Proliferating tricholemmal cyst tumors Pindborg tumors

Art Unit: 1624

calcifying epithelial odontogenic tumors. Pinkus tumors fibroepithelioma, placental site trophoblastic tumors a tumors usually arising in the uterus of parous women during reproductive years. Histologically, the tumors consists of a predominance of intermediate trophoblastic cells with fibrinoid material and vascular invasion. Pontine angle tumors a tumors in the angle formed by the cerebellum and the lateral pons, often refers to an acoustic schwannoma. potato tumors of neck a firm nodular mass in the neck, usually a carotid body tumors (chemodectoma). Pregnancy tumors, granuloma gravidarum, primitive neuroectodermal tumors a designation used to refer to a group of morphologically similar embryonal neoplasms that arise in intracranial and peripheral sites of the nervous system and which may show various degrees of cellular differentiation; includes medulloblastoma, pineoblastoma, etc. ranine tumors ranula (2). Rathke pouch tumors, craniopharyngioma, retinal anlage tumors melanotic neuroectodermal tumors of infancy. Rous tumors, Rous sarcoma. Sand tumors, psammomatous, meningioma. Sertoli cell tumors a tumors of testis or ovary composed of Sertoli cells; most often benign but may be malignant tumors Sertoli-Leydig cell tumors an ovarian tumors composed of Sertoli and Leydig cells; may secrete androgens. Arrhenoblastoma, gynandroblastoma (1). Sertoli-stromal cell tumors a generic term for ovarian sex-cord stromal tumors composed of Sertoli cells, Leydig cells, and cells resembling rete epithelial cells, either in a pure form or as a mixture of these cell types. solitary fibrous tumors a benign tumors of fibrous tissue which usually arises in the pleural space on other sites. Benign mesothelioma. squamous odontogenic tumors a benign epithelial odontogenic, tumors thought to arise from the epithelial cell rests of Malassez; appears clinically as a radiolucent lesion

Art Unit: 1624

closely associated with the tooth root and histologically as islands of squamous epithelium enclosed by a peripheral layer of flattened cells. Steroid cell tumors a collective term used for ovarian tumors composed of cells resembling steroid-secreting lutein cells; comprises several tumors such as stromal luteoma, Leydig cell tumors, steroid cell tumors not otherwise specified; hormonally active; may be benign or malignant tumors, hilar cell tumors of ovary, sugar tumors a benign clear cell tumors of the lung containing abundant glycogen. superior pulmonary sulcus tumors. Pancoast tumors. Teratoid tumors teratoma, theca cell tumors, thecoma, triton tumors a peripheral nerve tumors with striated muscle differentiation, seen most often in neurofibromatosis; named after the Masson theory of transformation of motor nerve fibers into muscle in triton salamanders. Turban tumors multiple cylindromas of the scalp which, when overgrown, may resemble a turban. Villous tumors villous papilloma. Warthin tumors, adenolymphoma. Wilms tumors a malignant renal tumors of young children, composed of small spindle cells and various other types of tissue, including tubules and, in some cases, structures resembling fetal glomeruli, and striated muscle and cartilage. Often inherited as an autosomal dominant trait, nephroblastoma. yolk sac tumors endodermal sinus tumors. Zollinger-Ellison tumors a non-beta cell tumors of pancreatic islets causing the Zollinger-Ellison syndrome."

Secondly, as stated in the MPEP, 2164.08 "[t]he Federal Circuit has repeatedly held that "the specification must teach those skilled in the art how to make and use the full scope of the claimed invention without undue experimentation'." In re Wright, 999 F.2d 1557, 1561, 27 USPQ2d 1510, 1513 (Fed. Cir. 1993). Nevertheless, not everything necessary to practice the

Art Unit: 1624

invention need be disclosed. In fact, what is well-known is best omitted. *In re Buchner*, 929 F.2d 660, 661, 18 USPQ2d 1331, 1332 (Fed. Cir. 1991). All that is necessary is that one skilled in the art be able to practice the claimed invention, given the level of knowledge and skill in the art. Further the scope of enablement must only bear a “reasonable correlation” to the scope of the claims. See, e.g., *In re Fisher*, 427 F.2d 833, 839, 166 USPQ 18, 24 (CCPA 1970). As concerns the breadth of a claim relevant to enablement, the only relevant concern should be whether the scope of enablement provided to one skilled in the art by the disclosure is commensurate with the scope of protection sought by the claims. *In re Moore*, 439 F.2d 1232, 1236, 169 USPQ 236, 239 (CCPA 1971). See also *Plant Genetic Sys., N.V. v. DeKalb Genetics Corp.*, 315 F.3d 1335, 1339, 65 USPQ2d 1452, 1455 (Fed. Cir. 2003) (alleged “pioneer status” of invention irrelevant to enablement determination)."

Claims 54-88 and 97 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. For reasons of record and stated above.

4. With regards to the 35 USC § 112, first paragraph rejection of claims 57-65, 89-93, 96 and 97 maintained in the last office action, the applicants’ arguments have been fully considered but are not found persuasive. The applicants’ stated that “it is well known to those of skill in the art what disorders are responsive to the induction of apoptosis” and O'Reilly and Orrenius are

Art Unit: 1624

cited in support. O'Reilly is speculative at best with respect to the induction of apoptosis as a mode of treatment for autoimmune disease.

The scope of the method claims are not adequately enabled for the treatment of the asserted diseases and/or disorders in the specification, nor is there any testing to indicate that the compounds of the instant invention are effective in the treatment of the asserted diseases and/or disorders.

Claims 57-65, 89-93, and 97 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. For reasons of record and stated above.

5. With regards to the 35 U.S.C. § 112, second paragraph rejections labeled e) and ag) maintained in the last office action, the applicant's amendments and remarks have been fully considered but they are not persuasive.

- e) The applicants' stated that "the specification clearly defines what is meant by the terms N-oxide derivatives and protected derivatives". However, it is a **derivative** where derivative includes more than is positively recited. Use of the term "derivative" includes more than that which is defined in the specification. A derivative is defined as "a compound derived or obtained from another and containing essential elements of the parent substance". Furthermore, it is

Art Unit: 1624

recognized that a protecting group is often used in a process, however, it is the compounds which are being claimed and "protected derivatives" does not define the compounds which the applicants are seeking patent protection for.

- ag) The applicants' stated that "disorders responsive to the induction of apoptosis are well known in the art". The scope of diseases and/or disorders associated with the induction of apoptosis such as autoimmune diseases is speculative at best as pointed out in the response to the scope of enablement cited above. It is not known at this time whether all of the diseases and/or disorders urged by the applicant are treatable by the induction of apoptosis.

Claims 1-14, 22-40, 47-93 and 97 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. For reasons of record and stated above.

6. With regards to the 35 U.S.C. § 112, first paragraph rejection of claim 97, the applicant's amendments and remarks have been fully considered but they are not persuasive. The applicants stated that each of the disorders listed in claim 97 finds support in the present specification. In particular, rheumatoid arthritis is disclosed at page 41, lines 3-15 and autoimmune lymphoproliferative syndrome is disclosed at page 39, lines 6-11". However, rheumatoid arthritis and lymphoproliferative syndrome are not described in the specification as autoimmune diseases.8. Claim 97 is rejected under 35 U.S.C. 112, first paragraph, as containing subject

Art Unit: 1624

matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. For reasons of record and stated above.

7. The applicant's amendments and arguments are sufficient to overcome the 35 U.S.C. § 112, second paragraph rejections labeled paragraph 9 of the last office action, which are hereby withdrawn.

In view of the amendment dated July 23, 2003, the following new grounds of rejection and/or reinstated rejections apply:

Claim Rejections - 35 U.S.C. § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

8. Claims 12, 34, 53, 60, 62, 69, 71 and 81 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The following reasons apply:

- a) Claims 12, 34, 62, 71 and 81 recite the limitation "2-....-3-hydroxy-cyclohex-2-enone" in the species on pages 14, 20, 39, 54, 55 and 70, respectively. There is insufficient antecedent basis for this limitation in the claim.

Art Unit: 1624

- b) Claim 53 recites the limitation “-R⁹” in the definition of A³. There is insufficient antecedent basis for this limitation in the claim. It is believed that the applicants’ intended -X²R⁹.
- c) Claims 60 and 69 are vague and indefinite in that it is not known what is meant by the definition of A² which is as defined above. However, A² is not defined within the claim.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brenda Coleman whose telephone number is (703) 305-1880. The examiner can normally be reached on Mondays from 8:30 AM to 5:00 PM, on Tuesdays from 8:00 AM to 4:30 PM, on Wednesday thru Friday from 9:00 AM to 5:30 PM.
